DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/7/2004 has been entered.

Allowable Subject Matter

2. Claims 27-36 and 38-50 are allowed.

Regarding Claim 27, Dennison, Kim, and Menich do not teach, alone nor in combination,

processing location information related to the mobile station by comparing position information of the mobile station with position information related to the base transceiver stations, deciding on the basis of the result of said processing of said location information, whether a first handover condition based on said location information is fulfilled or not, wherein said first handover condition is based on said location information and indicates that a handover is necessary for establishing or maintaining the communication between the mobile station and the communication network, when the first handover condition is not fulfilled, checking subscriber specifications, whether or not another measurement, which is related to a handover and is not based on said location information, is to be performed; in addition to

selecting a measurement of availability of traffic channels as the type of the further measurement, if the another measurement is to be performed,

executing the measurement of availability of traffic channels selected in said selecting step;

verifying, whether the measurement of availability of traffic channels results in a second handover condition, and if the result of said verifying step indicates that the second handover condition is fulfilled, and

designating a next base transceiver station in said communication network, to which the communication with said mobile station is to be directed from a current base transceiver station, when the first handover or the second handover condition is fulfilled.

Regarding Claim 43, Dennison, Kim and Menich do not teach, alone nor in combination,

processing location information related to said mobile station by comparing position information of the mobile station with position information related to base transceiver stations, and for deciding on the basis of the result of said processing of said location information, whether a first handover condition based on said location information is fulfilled or not, wherein said first handover condition is based on said location information and indicates that a handover is necessary for establishing or maintaining the communication between the mobile station and the communication network, for checking, when the first handover is not fulfilled, subscriber specifications, whether or not another measurement which is related to a handover and is not based on said location information is to be performed; in addition to

a measurement means being responsive to the subscriber specifications and adapted to

check whether another measurement is to be performed,

select a measurement of availability of traffic channels as the type of the further measurement, if the another measurement is to be performed,

execute the measurement of availability of traffic channels selected,

verify, whether the measurement of availability of traffic channels results in a second handover condition,

and if the result of the verification indicates that the second handover condition is fulfilled, forward the measurement result to said handover condition processing means for performing the handover.
